Contents

This Open File contains the geochemical, mineralogical and grain size (textural) data produced as part of till sampling surveys completed in the region of four Cu-porphyry mineralized zones in British Columbia: Highland Valley Copper Mine (Cu-Mo porphyry), Gibraltar Mine (Cu-Mo porphyry), Mount Polley Mine (Cu-Au porphyry), and the Woodjam prospect (Cu-Au-Mo porphyry). It includes quality control and quality assurance measures which demonstrate that analytical results are fit for geological interpretation and are not affected by analytical artefact or sampling. This project was a collaborative effort conducted by the Geological Survey of Canada and the British Columbia Geological Survey under the Targeted Geoscience Initiative-4 (TGI-4) Program.
