DIAGRAM SHOWING LOG OF BORE-HOLES IN COAL.
HAT CREEK COAL FIELD.

HC 2.5(2)A

This drill-hole, being in the eastern fault-plane, the coal proved to be much broken and displaced to furnish reliable information as to dip, thickness and quality of beds, &c. Here it probably approaches the vertical line fault that marks the eastern limit of the field.

Scale: 40ft. = 1 inch.

E. H. HARGREY
Mining Engineer
Vancouver
July 11, 1925.
