Silver Ridge Mining Co. Ltd.,  
373 Baker St.,  
Nelson, B.C.

DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The country rocks are slates, argillites, limestones and quartzites of the Slocan series. They are intruded by granitic rocks of the Nelson batholith. A mineralized fracture cuts through limestones and argillites in a N80°E direction. It contains calcite and small amounts of sphalerite.

HISTORY OF EXPLORATION AND DEVELOPMENT  
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The claim is located on the west side of Wild Goose Basin, near the headwaters of Howson creek. It was Crown-granted to J.G. Steel in 1900 and to H.H. Falding in 1917 and 1925. About 1950 the claim became a part of the holdings of Silver Ridge Mining Co. Ltd.

An adit was driven 200 feet westerly at an elevation of 6,690 feet. At 190 feet the drift turns to the southwest to follow light shearing into which the mineralized fracture swings. At 70 feet from the portal a branch extends 65 feet to the south in limy rock. The records do not indicate when or by whom this development work was done. Information is lacking as to the nature of the mineralization.
