OWNER OR OPERATOR/PROPRIÉTAIRE OU EXPLOITANT

DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The country rocks are slates, argillites, limestones and quartzites of the Slocan series. They strike north 25° west and dip 42° northeast. The workings explore a vein which is reported to swing from north 70° east to north 30° east and then back to the more easterly direction. An ore shoot was found along the north 30° east portion of the lode, which conforms with a series of closely spaced joint fractures in the enclosing rocks. The ore is chiefly argentiferous galena in a quartz gangue.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

This claim is situated on the south slope of Goat Mtn. which is at the head of Jackson Creek, a tributary of Kaslo Creek. It is accessible by road and trail up Jackson Creek from Retallack station.

Work on the claim was begun in 1894 and continued intermittently up to 1910. Thereafter the property lay idle for many years and the workings, including two, perhaps more, adits, became inaccessible. In 1946 the claim was acquired by L. Garland of Retallack and he in turn sold it to Silverite Mines Ltd. later in the year. There is no record of this company having done any work on the property. Leasers did some work on the claim in 1949, however the extent of the underground workings at this time are not known.

HISTORY OF PRODUCTION/HISTORIQUE DE LA PRODUCTION

The record of production from this claim is incomplete. In 1894 about 20 tons of high-grade ore were shipped from this claim. Other small shipments were reported to have been made from 1903 to 1910. In 1938, 2 tons of ore were shipped. This ore contained 38 ounces of silver per ton and 50 per cent lead.
