DESCRIPTION OF DEPOSIT

Ore or substance

Character of Deposit Zinc mineralization is found in Helway formation in 2 places, on this property. Horned coloured sphalerite is found on the west side of Russian Creek about 700 feet north of the International boundary, as finely disseminated grains in grey and white banded limestone. The grade is low and the extent of the mineralization is uncertain. The other occurrence about <sup>Country Rock</sup> 400 feet to the southeast consists of a few pockets of limonitic goossen, in limestone and dolomite.
