

## NAME OF PROPERTY

BELL No. 14 (VIMY RIDGE)

OBJECT LOCATED - showing, from descriptive data.

UNCERTAINTY IN METRES 1,000. Lat. 50°52'00" Long. 117°43'50"

Mining Division Revelstoke District

County Township or Parish

Lot Concession or Range

Sec Tp. R.

## OWNER OR OPERATOR

## DESCRIPTION OF DEPOSIT

Map 235 A indicates the area is underlain by the Precambrian Lardeau Series.

The rocks near the showings are green and grey phyllites with thin lenses of white limestone. On Vimy Ridge several veins well mineralized with galena, sphalerite, and chalcopyrite cut a lens of limestone which is up to a few feet thick. The veins trend northeast and transect folds that plunge at low angles to the southeast. In three of six trenches, sulphide mineralization occurs in the veins up to widths of 10 inches and has spread out from them into the limestone to a maximum distance of about 2 feet from the vein. The trenches extend for about 200 feet along the top of the ridge which trends southeast and is crossed by the veins. Mineralized limestone in two of the trenches is near the crest of a fold. A sample across 12 inches is reported to have assayed 0.03 ounce gold, 10.7 ounces silver, 16.2% lead, 5.6% zinc, and 0.75% copper.

Associated minerals or products - Gold, silver, zinc, copper.

## HISTORY OF EXPLORATION AND DEVELOPMENT

The showings are located on the crest of a ridge, locally called Vimy Ridge, which forms the pass between the two main forks of Stephney Creek, about 10 miles north of Beaton.

Teddy Glacier Mines Limited discovered the showings in 1964 on the Bell No. 14 claim while building a road to the Teddy Glacier showings (82 K/13, AG 1) some 3,000 feet to the northwest. A limited amount of work was done on the showing in 1964. During 1965 further trenching and prospecting was carried out.
