

NAME OF PROPERTY KING TUT

OBJECT LOCATED - from descriptive data.

UNCERTAINTY IN METRES 1,000. Lat. 51°04'50" Long. 119°35'15"

Mining Division Kamloops District

County Township or Parish

Lot Concession or Range

Sec Tp. R.

OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

The property is underlain by a thick assemblage of metamorphic rocks of probable Paleozoic or earlier age. A quartz vein in sericite schists strikes N55°E and varies from 18 inches to 4 ft. in width. A short adit cuts a 1½ ft. wide quartz vein containing a little pyrite, galena, and sphalerite. Five hundred feet from the adit a trench exposes a 2-2½ ft. wide vein of quartz containing small amounts of pyrite, arsenopyrite, galena, and sphalerite and a short 2- to 3-inch lens of a fine-grained mixture of galena and sphalerite. A sample taken in 1930 across 2 ft. of vein in an open cut is reported to have assayed: gold, trace; silver, 8.6 ounces per ton; lead, 7.6%; zinc, 21.5%

Associated minerals or products of value - Silver, zinc.

HISTORY OF EXPLORATION AND DEVELOPMENT

The showings are located at approximately 6,000 feet elevation on Adams Plateau, some 40 miles northeast of Kamloops.

The King Tut group of 8 claims, owned by F.A. McLeod of Salmon Arm, was located on the projected extension of the Lucky Coon vein (82 M/4, Pb 1) prior to 1930. Prospecting failed to find a continuation of the Lucky Coon vein. In 1930 showings were found near the east limits of the property and work in that and subsequent years included open cutting, stripping, and the driving of two short adits. No further activity was reported.

From about 1950 the showings were apparently held as a part of the Lucky Coon property.

Aquarius Investments Ltd. apparently held the Pete, Marty and other claim groups in this vicinity in 1968-69. Geophysical and geochemical surveys were carried out.
