DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

According to Gunning (1928, p. 191): "Dull grey, flaggy, crystalline limestone with slaty intercalations strikes north 15 degrees west and dips from 30 degrees to 50 degrees east ... Irregular lenticular veins, up to 18 inches wide, of white quartz and calcite, cut the limestone and are mineralized with pyrite, sphalerite, and galena. A mineral, thought to be grey copper in the field ... was found to resemble boulangerite (lead sulphantimonide) most closely. It is present in large amount in the ores ...".

Associated minerals or products - Lead, zinc.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The George group, staked in 1896, is 21 miles up the North fork of Illecillewaet River and includes the George, Reggie and Alto claims. The original owners were David and Emily Woolsey. In the period 1896-98, the vein was stripped for 200 feet and an adit driven 160 feet to cut the vein at depth. A winze, depth unknown, was sunk from the adit. According to Gunning, when he examined the property in 1928 these workings were badly caved. The last work done on the property was in 1927 when Messrs. D. and O. Woolsey, carried out some surface exploration.

HISTORY OF PRODUCTION/HISTORIQUE DE LA PRODUCTION

Recorded ore shipments were made as follows:-

<u>Year</u>	<u>Amt. (Tons)</u>	<u>Destination</u>
1899	4	Trail
1903	5½	Trail
1903	2½	Tacoma

The 5½ ton shipment is said to have returned \$110/ton and the 2½ ton shipment, \$116/ton, mainly in silver.
