DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Chalcopyrite and bornite, with which is associated some gold and silver, occurs here in a vein, one to 3 feet wide. The vein shows on the face of a high cliff of talcose and chloritic schists, and dips westerly at an angle of about 45°. The mineralization is in irregular masses and ribs, in a gangue of quartz-carbonate.

HISTORY OF EXPLORATION AND DEVELOPMENT HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property, consisting of the Silver Bow, Copper Crown and Copper Hill mineral claims, is situated about 4 miles north of Flat Creek Station on the Canadian Pacific Railway.

The first mention of the group is in the Annual Report of the Geological Survey for 1892-93. At that time the claims were owned by Messrs. Ryckman and Scott.

In 1896 the property was held by the Fish River Copper and Silver Mining Company. At that time the workings consisted of 2 adits 90 feet and 70 feet long, respectively.

In 1898 the Copper Crown and Copper Hills claims, and the following year, the Silver Bow claim were Crown-granted.

A sample of bornite assayed by the Geological Survey was found to contain a trace of gold and 19.075 oz/ton silver.

HISTORY OF PRODUCTION/HISTORIQUE DE LA PRODUCTION

18 tons of ore, said to have been high in copper and silver and to have contained some gold, was shipped in 1894.
