REMARKS

Bureau of Mines Report No. 803 p.59,60.  
M.C.File 167 - T3 - 2 - 6.

Colour is unusual, ranging from a deep bluish black to mottled cream and black. Black colour due to presence of finely disseminated amorphous carbon.  
Selected samples are of very fine lava quality.  
Property opened up during war by Wartime Metals Copr. as a source of lava talc. Did not arrive at production stage as supply position of lava talc improved.
