DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

"A shaft sunk on a small copper prospect in Gardner Bay on the east (west ?) side of Bowen Island is reported to have encountered a thin seam of bornite along a shear zone in the volcanic rocks of the Bowen Island group. At the time of examination it was impossible to verify this discovery as the shaft, said to be about 75 feet deep, was flooded and the surface overgrown". (Armstrong, 1954, p. 6).
