## BIBLIOGRAPHY

## REMARKS

C.P.R. Devel. Section Nov. 12, 1947.

*Field Report. V.L. Cardley - Wilmot. July - Aug. 1948.*  
*B6 Dept. of Mines. 1951 - P. 222*

The location is approximately 1/3 mile south of the west end of the C.P.R. siding at Semlin, B.C. It is located on the east side of north-south trending gulch approx. 100 ft. above track level. The material is schistose in texture with a waxy white appearance and definitely soapy feel. Powder when dry is paper white.

Chemical analyses is as follows:

|                                     |        |
|-------------------------------------|--------|
| Silica                              | 74.6%  |
| Alumina                             | 19.85% |
| Iron oxide                          | .10%   |
| Calcium oxide                       | .56%   |
| Magnesia                            | nil    |
| H <sub>2</sub> O of crystallization | 4.67%  |

BIBLIOGRAPHY

REMARKS

Personal information by Mr. J.M. Cumming,  
B.C. Dept. of Mines.

Material is badly discoloured with iron stain.  
Indications are not too encouraging for the development  
of the deposit.
