DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The claims are staked along a band of highly altered green schists which have a general northeasterly strike and are bounded on each side by the granitic rocks which form the mass of the mountain. A fissure in the hornblende-diorite country rock is slightly mineralized with sulphides of iron and copper. Some assays are said to run as high as 9.6% copper. Gold values have been reported.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

Both of these showings are apparently located on the west side of the Necleetsconnay River about 2 miles north of Bella Coola.

The Bella Coola group was owned and prospected by the Bella Coola Copper Co. in 1907 and 1908; the work consisted of open cuts and stripping.

The Sure Copper group was held by the North Coast Copper Company from about 1907 until 1910 when the claims were allowed to lapse. Exploration work by the company was done in two adits on the O'ga claim. The upper adit is 74 feet long; the lower adit, some 300 feet below the upper, is 120 feet long.

No mineralization of value was found in the adits.
