DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The adit is along a shear-zone striking N35°W and dipping 70°SW that cuts fine and coarse tuffs striking N10°W and dipping 65°E. Two open cuts have exposed the shear-zone 170 feet to the southeast and 90 feet to the northwest from the adit. In the adit the shear zone contains two narrow quartz stringers, 1 inch and 6 inches wide, respectively, and about 6 feet apart, mineralized with pyrite, galena, sphalerite, and arsenopyrite. A grab sample from the dump assayed: gold, 0.10 oz and silver, 6.3 oz per ton; lead, 1.4%; and zinc, 5.4%. East of this adit and a little lower on the mountain a shear zone that strikes N40°E and dips vertically is exposed for about 100 feet. The zone is about 2 feet wide and contains some quartz with which the minerals galena, arsenopyrite, and lollingite are associated.

Associated minerals or products - Lead, zinc.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

These claims are located on the south side of Chikamin Mountain just below the summit, about 2 miles northwest of Eutsuk Lake. Development work consists of an adit about 25 feet long, known as the California, and some open cuts.
