DESCRIPTION OF DEPOSIT / DESCRIPTION DU GISEMENT Type/Type Host Rocks/Roches hôtes		<p>The property is located on Lightning Creek, downstream from the junction of Angus Creek, 23 miles east of Quesnel. The property consists of P.M.L. 5698; 5626; 5743; 6016; 5809; 5427; 6015; 7406. In 1966, Vigor Exploration Ltd. optioned both, the neighbouring Wingdam and the Hannador properties and operation began in 1967. The average value from surface to the pre-glacial channels were estimated 0.023 ounce per cubic yard Au. In 1969, Harcol Placer Production Limited, cleared an area 600 feet x 100 feet, dug several trenches and drilled 230 feet, while under contract to the owner, Hannador Gold Ltd. Operations continued in late 1981. Along Lightning Creek, there were identified 18,000 cubic yards of pay gravel of equivalent to 0.025 ounce per cubic yard Au. A potential of 1,000,000 cubic yards was projected for the Bonanza Bank on P.M.L. S5698; 5626; 5427.</p> <p>In 1982, Strategic Minerals Ltd. shipped 1,587 ounces of placer gold and received payment for 1,023 ounces of gold 92 ounces of silver. About 70,000 cubic yards were washed during production. In 1985, R. Hetke Construction Ltd. was operating on P.M.L. 5743 along and into the South Terrace of Lightning Creek. There were recovered 347.15 ounces of gold from about 20,000 cubic yards reportedly equivalent to 0.017 ounce per cubic yard Au.</p> <p>In 1987, Silvera Resources Inc. optioned and leased the property from Hannador Gold and then assigned it to Gallery Gold Mines Ltd. Gallery did bulk testing, pilot operation and 45,000 cubic yards of overburden were stripped blocking out 64,000 cubic yards of ore. Bulk testing showed 0.0076 ounce per cubic yard Au. Production was started in 1990 and the first shipment of 120 ounces was sent to refinery in Richmond, B.C.</p>
