OBJECT LOCATED - showing.
 UNCERTAINTY IN METRES 2,000. Lat. 54°40'10" Long. 126°35'50"
 Mining Division **Omineca** District **Range 5 Coast**
 County _____ Township or Parish _____
 Lot _____ Concession or Range _____
 Sec _____ Tp. _____ R. _____

OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

On the summit of the hill a 6 foot wide fissure in andesite strikes N40°E and dips about 60° southeast. Mineralization includes tetrahedrite and minor chalcopyrite. A sample across 6 feet assayed: gold, trace; silver 1.8 ounces per ton; copper, 0.6 per cent. About 500 feet south of the shaft a band of volcanic rock about 11 feet in width shows slight copper mineralization; a sample assayed: gold, trace; silver, 1.8%; copper, 0.5 per cent. About 1,200 feet west of the shaft an intrusion of granitic rock shows local quartz veining containing some copper mineralization; a sample across a 9 inch vein assayed: gold, trace; silver, 2.0 ounces per ton; copper, trace.

HISTORY OF EXPLORATION AND DEVELOPMENT

The Ivanhoe group was reported to be located on the summit of a hill at elevation 4,495 feet, about 4 miles north of Deep Creek.
 The Ivanhoe group of claims, owned in 1928-29 by T. Blythman, were under option to Alex Chisholm, of Smithers. The only working mentioned in 1928 was a 10 foot deep shaft. Chisholm is reported to have carried out considerable work on the showings in 1929.
 The Tony 1-24 claims, owned by J.C. Bot, were under option in 1968 to Dome Babine Mines Ltd. Airborne magnetometer and electromagnetic surveys were carried out. Manex Mining Ltd. held the claims in 1970; a geophysical survey was reported.
