DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

A quartz vein with a maximum exposed width of 2.5 feet strikes N40°W (mag.) and dips steeply northeast in andesitic volcanics. The vein is well mineralized at one point with pyrite and chalcopryrite. A sample of the best mineralization assayed: Gold, 0.04 ounce per ton; silver, 5 ounces per ton; copper, 10%. A sample of the oxidized portion of the vein assayed: Gold, 0.04 ounce per ton; silver, 5.4 ounces per ton; copper, 1 per cent.

Gold, copper

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The location of the Hope group was described in 1932 as follows: ... on steep mountain slopes on the right bank of the East Fork of Goat Creek at an elevation of 4,530 feet, 6 miles by trail from F.M. Dockrill's coal mine. This appears to put the location in the vicinity of ground held in later years as the Old Tom 1 and 2 claims (see 93 L/11, CU 2).

The Hope group was owned in 1932 by W.S. Duncan and associates, of Telkwa.

Report of Minister of Mines, British Columbia: 1932, p. 85.
