## NAME OF PROPERTY

EVELYN

OBJECT LOCATED - south half of Lot 3290.

UNCERTAINTY IN METRES 100. Lat. 54°55'20" Long. 127°19'

Mining Division Omineca District Range 5 Coast

County Township or Parish

Lot Concession or Range

Sec Tp. R.

## OWNER OR OPERATOR AND ADDRESS

## DESCRIPTION OF DEPOSIT

Coal seams up to 9 inches thick occur in feldspathic sandstones between elevations of 1,600 and 1,700 feet along the banks of the creek. The strata strike east and dip 45 to 65 degrees north. The coal seams occur in one place at closely spaced intervals, separated by seams of bone. A sample of coal collected by Douglas Lay (1929) from a cut 8 feet deep yielded the following analysis: moisture, 1.2 per cent; volatile-combustible matter, 22.2 per cent; fixed carbon, 50.4 per cent; and ash, 26.2 per cent.

## HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located on an easterly flowing tributary of Toboggan Creek, 11 miles northwest of Smithers.

In 1929 a coal lease was staked by W.A. McMaster and Axel Peterson.
