DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Drilling near the central part of the property indicated depths of overburden exceeding 50 feet. Drill cores from this particular area showed it to be underlain by an inter-bedded sequence of moderately dipping fragmental andesites and black argillaceous, locally graphitic, sediments. Intersections of up to 5 feet of disseminated, stringer and massive banded pyrrhotite and lesser pyrite were noted within the graphitic zones.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located on the east side of Babine Lake about a mile north of Hawthorn Bay.

The Trek Group of 100 claims was staked by Bethex Explorations Ltd. in March 1966. Geological and geophysical surveys were carried out. In 1967 the property was expanded to 126 claims. Magnetometer and induced potential surveys indicated several anomalous areas. Diamond drilling totalling 3,178 feet in 9 holes was carried out.

Canadian Superior Exploration Limited held the property as the Hag 1-64 claims in 1972. Work included an induced potential survey over 10 line-miles covering Hag 1-26 and 47-49, a magnetometer survey over 32 line-miles covering all claims, and a geochemical soil survey (874 samples) covering all claims.
