DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The lake is 1,900 feet long from north to south with an average width of 400 feet. It is a clear water lake, in few places over 5 feet deep except in the center where there is 30 feet of water. Everywhere in shallow water the lake bottom consists of a thick deposit of soft white to grey marl. At the north end of the lake an inflowing stream has supplied dark vegetable matter, which is deposited locally with the marl. The best quality of white marl is found at the south, or outlet, end of the lake. Here a 12-foot pole pushed down into the deposit does not reach the bottom of it. Elsewhere the calcium carbonate layer is at least 6 foot thick.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

Robinson Lake is located 5½ miles northeast of Hazelton.

In 1950 American Standard Mines, Limited, applied for an 80 acre land lease covering the Robinson lake deposit.
