OWNER OR OPERATOR AND ADDRESS

New World Jade Ltd.

DESCRIPTION OF DEPOSIT

Jade boulders and jade in place.

The bedrock occurrence, in a contact zone between serpentine and rocks of the Cache Creek Group, is exposed for 150 feet along trend. Part of the zone consists of talc schist and rodingite or "white rock" which together with the jade is up to 10 feet wide. Except at the outcrop, the zone is concealed by overburden, but the aeromagnetic map indicates a possible continuation for at least a mile.

HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located on the southwesterly side of Mount Ogden, approximately 53 miles west-northwest of Manson Creek.

Some 77 claims were reported staked in 1967 by Stan Porayki and Larry Owen. Several shipments of jade were reported in subsequent years. New World Jade Ltd. was incorporated in February 1971 to acquire the property. Production in 1971 was reported at between 100 and 150 tons.

Associated minerals or products of value
