This group of claims is near the head of the east branch of Etschitka Creek at about 7,500 foot elevation. Etschitka creek joins the Mesilinka river northwest of Finlay Forks. This group was staked in the autumn of 1946 for the Consolidated Mining & Smelting Co. No development work has been reported on this property but apparently it is being held for future exploration. Bethlehem Copper Corp. Ltd. has an interest in the group.

OWNER OR OPERATOR/PROPRIÉTAIRE OU EXPLOITANT

The Consolidated Mining & Smelting Co. of Canada Ltd.,
630 Dorchester Blvd. W.,
Montreal.

DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The country rocks are granodiorite, quartz diorite, diorite and feldspar porphyry of the Hogem batholith. The Takla group, consisting of andesitic flows, basalt, tuff, shale, conglomerate and limestone, outcrops about 3 miles to the northeast. The claims cover a shear zone in quartz monzonite and diorite. The zone contains numerous quartz and quartz-carbonate veins, in two intersecting sets, one of which is reported to have provided fairly consistent, but low, assays in gold and silver.

Associated minerals or products - Silver.
