OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

Disseminated sulphides and minor lenses of massive magnetite with minor chalcopyrite veins occur in Takla Group sedimentary and volcanic rocks.

HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located at approximately 5,700 feet elevation at the head of Kliyul Creek.

Kennco Explorations, (Western) Limited held the KLI 1-38 claims in 1970 and carried out a magnetometer survey. The property was subsequently expanded to 50 claims (KLI 1-50). Work by Kennco in 1971 included a soil and silt geochemical survey over KLI 1-38 claims, and induced potential and magnetometer surveys over 8 line-miles.

Sumac Mines Ltd. held an option on the property during 1973-1974 and carried out 3,455 feet of diamond drilling in 14 holes.

Vital Resources Ltd in November 1977 optioned 40 units in the KLI and UTA claim groups under an agreement with Sumac and Kennco. Work by Vital in 1980 included 602.9 m of diamond drilling in 4 holes on KLI 4, 6, 15. The drilling outlined 500,000 tons grading 0.06 oz/t Au, 0.2 oz/t Ag, 0.46% Cu (Northern Miner, 20/09/94, p. A 22). In July 1984 Vital amalgamated with Brandy Resources Inc under the name Vital-Pacific Resources Ltd.

BP Selco Inc optioned the property from Kennco and Vital Pacific in July 1984 and carried out geological mapping and rock sampling; the option was abandoned in 1985.

Associated minerals or products of value - Gold, iron, silver.

Mineral Resources Branch, Department of Energy, Mines and Resources, Ottawa.
