

PRODUCT		COAL		TERRITORY		N.I.S. AREA		94 G/2		REF. COL 1	
NAME OF PROPERTY						PINK MTN.					
OBJECT LOCATED - Coal seam reported by Hage, 1944.											
UNCERTAINTY IN METRES 1,000.						Lat. 57°01'		Long. 122°51'30"			
Mining Division Liard						District		Peace River			
County						Township or Parish					
Lot						Concession or Range					
Sec						Tp.		R.			
OWNER OR OPERATOR AND ADDRESS											
DESCRIPTION OF DEPOSIT											
<p>Fine-grained sandstone, minor shale, coal, and conglomerate of the Lower Cretaceous Gething Formation occur in a northwesterly trending anticlinal structure extending from 5 miles south of the Halfway River to 20 miles north of Pink Mountain. Coal measures have been exposed in cuts of oil exploration roads in the vicinity of Pink Mountain. Various sections of the generally thin-bedded Gething Formation have been increased to possible economic thickness by local flexing. Hage (1944) reports as follows: "At the base of the Bullhead Group on Pink Mountain, immediately north of Halfway River and close to the crest of the anticline, is a seam of good grade coal over 5 feet thick." Analysis indicate the coal can be classified as low volatile bituminous. Coking qualities are good, but sulphur content is high (5 to 7 per cent).</p>
