OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

The property is underlain by volcanic and sedimentary rocks of the Triassic Karmutsen Formation. The showing consists of pyritic magnetite replacing metamorphosed Karmutsen greenstones, adjacent to minor limestone beds striking N30°W and dipping about 50°E.

HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located on the west side of Lyell Island, Queen Charlotte Islands, northwest of Lyell Bay. The showings are less than 100 feet from shore.

The property was held in 1965 as the Marven group of 10 located claims. During the year Falconbridge Nickel Mines, Limited, put down 2 short packsack diamond drill holes; one bottomed in skarny magnetite at 90 feet; the other ended in greenstone at 74 feet. In 1964 a detailed magnetometer survey of the property was carried out by Placid Oil Company.
