OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

The deposit consists of small, sometimes pyritized, quartz lenses, lying in shear zones in quartz diorite.

Associated minerals or products of value - Silver.

HISTORY OF EXPLORATION AND DEVELOPMENT

The showings are situated on the west side of Drake Inlet (Princess Royal Island) near the adjoining Cornwall Inlet (referred to in older reports as Rivers Bight).

In July 1920, the Cordilla group, consisting of six claims, the Mountain View, Royal, Landslide, Bight, Counder and Present, was staked by Cordilla and Koski. The claims were bonded in 1921 to the Rivers Bight Syndicate.

During 1921-22, a 300 foot long adit was driven along the mineralized shear zone but the results were unsatisfactory, and the bond lapsed in 1922. In 1926 the owners extended the adit a short distance.

No further work has been reported since then.
