Mining Division Skeena District Range 4 Coast

County Township or Parish

Lot ~~0000000000~~ Range 4

Sec Tp. R.

OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

The formation consists of hornblende-schist of the Rupert series underlain at shallow depth by granitic rocks of the Coast Range batholith.

The mineral deposit is a rather sparse mineralization of a 6-8 foot wide quartz vein with thin films of marcasite, chalcocopyrite and magnetite.

HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located approximately 1 mile south-southeast of Leading Point, on the northwestern end of Princess Royal Island.

In January 1920, Whale Channel Mines, Ltd., was incorporated. It's holdings at that time included the Moose 1-3. Prior to 1920 work on this property included a 70 foot adit crossing the vein, and a 12-14 foot deep shaft on the vein.

During 1920 two trenches were cut on the vein.

It is reported that Belmont-Surf Inlet Mines worked the above group of claims during 1923.

In 1934, the showing was restaked as the Campania group.

In 1935, the regional geologist, reporting property assessment work, found a 1,200 foot adit along the strike of the vein, which appeared to have been driven prior to 1934, but for which there is no report.
