STEWART (TECKLA Gp.)

OBJECT LOCATED -Centre of group.

UNCERTAINTY IN METRES 100. Lat. 53°29'20" Long. 128°00'40"

Mining Division Skeena District Range 4 Coast

County Township or Parish

Lot ~~CONCESSION~~ Range 4

Sec Tp. R.

OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

The main zone of mineralization reportedly occurs in a quartz porphyry vein varying in width from 100-300 feet. This vein, which strikes N60°W and dips S60°W occurs in the granodiorites of the Coast Range batholith. Values in gold, silver and copper are distributed throughout the vein, and in places small shoots of good grade mineralization occur. About 300 feet to the east of this vein there is reported to be another smaller vein - 7½ feet wide. A sample from this zone consisted of quartz with considerable amounts of bornite and chalcopyrite.

HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located on the east side of Kemano River, approximately 4 miles east of Kemano Bay.

The property was originally discovered and staked in 1901 by Mr. Pocklington. In 1914, J.L. Stewart restaked the showings under the name "Tekla group". This group included the Minnie, Dave, Teckla, Ventla, and Chief claims. No work, other than assessments, was done.

In 1921, Stewart sold his interests in the property to Messrs. M.M. Stephens, H.B. Babbington, and H. Flewin. A short adit was driven under the best showing, but results were disappointing.
