DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The country rock consists of Coast Intrusives granodiorite cut by dykes of quartz-orthoclase porphyry and by later dykes of quartz diorite and lamprophyre. Two parallel fault fractures lie about 530 feet apart and strike north 30 degrees east magnetic across the claim. Quartz veins which follow the faults contain little or no sulphide and assay only a trace in gold and silver. Locally, a narrow, sheared, and carbonated zone contains small seams of chalcopyrite and galena. A selected sample of quartz with chalcopyrite from an open cut in 1929 reportedly assayed 1.92 oz/t Au and 0.5 oz/t Ag.

HISTORY OF EXPLORATION AND DEVELOPMENT
 HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located approximately 1/2 mile northwest of the summit of Mount Thornhill, some 6 miles east of Terrace. The La Libertad claim was owned in 1929-30 by A. Fitzpatrick, of Terrace. Assessment work was done in open cuts. The ground was restaked in 1983 as the Thorn 1 claim (4 units) by A & M Exploration Ltd and transferred to Seastar Resource Corporation. A preliminary geochemical survey was carried out in 1984.
