DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The showing consists of a quartz vein lying in the contact between two highly altered rocks, apparently volcanics, one of which is green in colour and the other red. The vein, which is from 2 to 4 feet wide, is filled almost entirely with quartz with but little inclusions of wall-rock. The metallic minerals, which occur in the quartz in sparing quantities, are galena, pyrite, and a little chalcopyrite. The vein crops out up and down the bluff for a few hundred feet.

The solid galena is said to carry good silver values, but the amount of clean galena in the vein is small. A sample taken across 2½ feet of the vein assayed: Gold, 0.12 oz; silver, 10 oz; copper, 0.5 per cent. A sample of clean quartz returned: Gold, trace; silver, 1.2 oz.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located at about 5,000' elevation on the west side of the main fork of Legate Creek, some 20 miles northeast of Terrace.

The property was owned from 1915 or earlier by Mr. Halliday. The J.J. Price interests optioned the property in 1916 but there is no report of work done. The owners continued assessment work into 1921.
