DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Triassic (?) andesitic rocks are intruded by diorite of the Coast Intrusives. A quartz vein up to 3' wide strikes N50°W and dips 70°NE in altered andesite. Gold is associated with irregular occurring sulphides, mainly coarse pyrite. Sampling in 1983 across 3' at the portal of the adit assayed: Gold, 0.706 oz/t; silver, 0.33 oz/t. A chip sample on surface across a 20' width of altered andesite on the hanging wall of the vein assayed 0.232 oz/t Au, 0.18 oz/t Ag.

HISTORY OF EXPLORATION AND DEVELOPMENT  
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located at the 3,800 foot elevation on the west side of Kleanza Mountain, some 9 miles northeast of Terrace.

The ground was reported held by Columario Consolidated Gold Mines, Limited, possibly under option from Captain Willman, of Usk, during the period 1933-1935. No work was reported at that time; old workings on the property include a 20' adit. The showings were restaked as the 6 claim Victor group in 1937 by W.W. Duncan, of Usk, and S.C. Cooper, of Terrace. Samples were shipped to the Dept. of Mines sampling plant at Prince Rupert in 1939 and 1940; work was confined mainly to the adjacent Valhalla property (103 I/9, Au 3).

The showing was restaked as the Nelson claim (2 units) for Endurance Minerals Inc in 1983; prospecting and sampling were carried out.
