DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The claims are underlain by Jurassic Hazelton Group andesite, volcanic tuffs, and breccia. Along the face of a steep bluff, at elevation 4,250 feet, these rocks are traversed by a 4-foot dyke of quartz porphyry. A rusty, altered zone extends for 2 or 3 feet on both sides of the dyke and at intervals there are short quartz veins along the dyke. Veins and dyke strike south 60 degrees east and dip 75 degrees southwest. They are exposed for several hundreds of feet along the precipitous rock slope. Both veins and altered zone contain a little chalcopyrite and bornite. A typical sample of quartz and mineralized tuff assayed: silver, 0.26 ounce a ton; gold, none; copper, 0.20 per cent.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The showings are located at 4,250' elevation on the south side of Chindemash Creek, some 16 miles northeast of Terrace. L.E. Moody and G.T. Mills discovered the showing in 1925 and staked the Banner Homestake group of 5 claims. Some trenching was reported.
