DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The country rock is argillite near the eastern contact with igneous rocks, all of the Hazelton group. The mineral deposit is a northerly striking quartz vein 2-feet wide in a narrow shear zone. The vein is mineralized with galena, sphalerite, and pyrite, and in some places is nearly solid sulphide. Dykes cut the vein, and later movement along the hanging-wall of the vein has offset the dykes.

HISTORY OF EXPLORATION AND DEVELOPMENT  
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

This property is located at the 2,000 foot elevation on the north side of La Rose Creek, about 1½ miles west of the Kitsault River and 5½ miles northwest of the community of Alice Arm.

Seven claims, the Bunker Hill Nos. 1-4, Cougar, Bunker Hill Fraction, and Rocket, were located by J. Calvin, of Alice Arm, in about 1923. Three claims, the Bunker Hill No. 2-4 (Lots 927-929) were Crown-granted to J.O. Trethewey and J. Calvin in 1925. The showings were developed by open cuts and a short adit during the period 1923 to 1934.

The Bunker Hill group of 7 Crown-grants, Lots 927 to 929 and 5806 to 5809, was owned in 1968 by E.A. Trethewey, of Vancouver. Primer Group Minerals Ltd., Wm. Trethewey, President, prospected the claims during 1969.
