## OWNER OR OPERATOR AND ADDRESS

## DESCRIPTION OF DEPOSIT

The showings appear to be shear-zones in argillites and sandstones and are somewhat sparsely mineralized with chalcopryrite and pyrite. A cut has been made for a short distance on a vein striking N40°W and dipping 80° south-west. The filling consists mainly of quartz, calcite, and a little pyrite. There occurs a small carbonaceous seam on the foot-wall.

At about 100 feet to the south-east and 30 feet lower down a tunnel has been run a distance of about 10 feet on a flat stringer 6 inches wide, striking N80°E and dipping at about 20° to the north. The same stringer shows on the surface about 40 feet west of the tunnel portal and contains some irregular patches of chalcopryrite.

Associated minerals or products of value

## HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located at the 1,200 foot elevation on the south side of Wilson Creek, 1½ miles west of the Skeena River and ¾ miles southwest of Woodcock.

The Sunset claim was owned in 1929 by A.S. Gray. The workings comprised an open cut and short adit.
