DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The showings are in a narrow band of shales and limestones, which outcrop between bands of massive volcanic rocks striking S25°E and dipping 45° east. At one point along the top of the limestone-band is a cut exposing a zone, from 2 to 4 feet wide, mineralized with sphalerite and a little galena. About 50 feet southerly along the limestone-band is a zone containing a little pyrite and a considerable amount of fibrous hornblende, and in a cut 150 feet northerly is a cross-fracture, up to 2 feet wide, mineralized with sphalerite and galena. The cross-fracture and mineralization is confined to the limestones and does not extend into the overlying volcanics, 10 feet above.

HISTORY OF EXPLORATION AND DEVELOPMENT

HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

This property is located at the 4,700 foot elevation on the east side of Basin Creek, about a mile west of the summit of Mount Johnson and 17 miles north of Stewart.

The Anaconda Nos. 1, 2 and 3 claims were staked in 1924 by E.G. Raymond and associates of Seattle. In 1928 the property consisted of 5 claims, the Anaconda Nos. 1, 2, 4, 5, and Anaconda Extension No. 3. Some open cutting was done by the owners.
