## OWNER OR OPERATOR AND ADDRESS

## DESCRIPTION OF DEPOSIT

Triassic flows and pyroclastic rocks are intruded by felsite. Pyrite is widely disseminated through the rocks. A small high-grade showing near the centre of the claims consists of chalcocopper, bornite, chalcocite, covellite, and pyrite in varying amounts.

## HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located on the west side of Snippaker Creek 6 miles south of the Snippaker Creek-Iskut River junction some 80 miles south of Telegraph Creek.

A reconnaissance geochemical survey was carried out over the Snippaker Creek area in 1965 by the Scud Syndicate, which was comprised of Silver Standard Mines Limited, American Smelting and Refining Company, and Scurry-Rainbow Oil Limited. This property was in part staked as the Betty 157-264 group of claims (see Silver Standard Mines Limited 19th Annual Report for locations). Further geochemical sampling and prospecting was carried out in 1966. The claims were subsequently allowed to lapse.

The Tami 1-36 claims were held by Great Plains Development Company of Canada, Ltd. Work during 1972-1974, inclusive, included reconnaissance geochemical soil and silt surveys, geological mapping, a time-domain induced potential survey over 8.5 line-miles, and a magnetometer survey over 11.5 line-miles covering Tami 1-24 and 33-36.
