OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

Triassic flows and pyroclastic rocks are engulfed by Cretaceous granodiorite. Pyrite is widely disseminated through the rocks. The Snow zone on the northern part of the claims consists of variable amounts of chalcopyrite, pyrite, and malachite, with local galena and barite, associated with a quartz stockwork.

HISTORY OF EXPLORATION AND DEVELOPMENT

The property is located at the head of Snippaker Creek, approximately 14 miles south of the Snippaker Creek-Iskut River junction and 88 miles south of Telegraph Creek.

The Kim 1-36 claims were held by Great Plains Development Company of Canada, Ltd. Work during 1972-1974 included reconnaissance geochemical soil and silt surveys, geological mapping, and a geochemical soil survey (98 samples) over 4 line-miles covering Kim 13-22, and 26.
