DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The formation consists chiefly of folded, silicified argillite, with possibly some intercalated tuff beds, striking northwesterly and dipping northeasterly at varying low angles. These rocks are intruded by bosses, spurs, and dykes of granitic rocks related to the adjacent Coast Range batholith. The mineral deposit consists of a quartz vein striking northwesterly, dipping about 15°E with the mountain slope and conformable with the formation. The vein has been traced 230 feet northwesterly from the main exposure. About 1,000 feet to the southeast a 24 inch wide quartz vein outcrops in a creek. The main exposure shows a width of from 1 inch to about 4 feet, mineralized with patches and streaks of galena, sphalerite, tetrahedrite, and chalcopyrite. In an open cut a width of from 3 to 4 feet of quartz is exposed, with irregular mineralization but carrying a streak of possibly high-grade mineralization 2 to 3 inches wide on both the hanging and the foot-wall sides of the vein.

Associated minerals or products - Lead, zinc, copper.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The Munroe group is located at the 2,350 foot elevation on the east side of Mount Bayard, about 12 miles northwest of Stewart.

The showings were discovered and staked by Messrs. Munro, McDonald, and McBride in 1921. Development work at the main showing, located on the west side of and about 100 feet above the Salmon Glacier, consisted of open cutting and two short adits. The Munro Mining Company, Limited optioned the Munro and Boundary groups from Munro and McDonald in 1928. No development work was reported by the company; the option was dropped.

The Munro Nos. 1-5 claims and the Big Chief Nos. 1-3 claims (Lots 5413-5415) were Crown-granted to Munro and McDonald of Hyder, Alaska in 1929. The owners continued to prospect the showings. In 1934 their property consisted of 11 surveyed and Crown-granted claims and fractions, and 9 claims and fractions, possibly the Boundary group, held by location.
