DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Terrestrial deposits comprising pebble, cobble, and boulder conglomerate, sandstone shale, and coal outcrop along Rapid River and its tributaries southwest of the southern end of Horseranch Range. Coalified plant remains are abundant but only a few small, discontinuous lenses of badly checked lignite coal have been noted. On the northeast side of Rapid River the northernmost outcrops of the terrestrial sediments contain several small seams - one seam 6 to 12 inches in width. (After Gabrielse, 1963, p. 95).
