Vancouver, BC.

DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Mineralization is reported to consist of a bedded deposit containing pyrrhotite, pyrite, chalcopyrite, and sphalerite in argillite interbedded in volcanics.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is about 5 miles south-southeast of Cassiar at the juncture of Lang and McDame Valleys.

The Copper Nos. 1-32 recorded claims and the Lark group of 20 recorded claims were optioned from W. Storie and associates, of Cassiar, by Cominco Ltd. The Bass Nos. 1 to 10 recorded claims were staked by the company. Work on the Copper and Bass groups (Lang Creek) in 1961 included a Ronka EM geophysical survey, plane-table mapping, and 2,202 feet of diamond drilling in 12 holes. Work on the Lark group, which adjoins the Lang Creek group, included 500 feet of diamond drilling in 3 holes, geophysical surveying, and mapping. The option was reportedly dropped in 1961.

Crown Point Exploration Ltd., incorporated in 1966, acquired 82 recorded claims, including the Bass and Crown Point, extending from about 1 mile to about 6 miles south-southeast of the town of Cassiar. The property was subsequently expanded to 170 claims. These claims surrounded the Marble Creek property and extended southeastward to cover the Lang Creek showings. Work by the company during 1967 included geological and magnetometer surveys, and 2,149 feet of diamond drilling in 11 holes. It is not known if this work was done on the copper showing.

Coast Silver Mines Ltd. optioned the property in 1968.
