DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The upper half of the creek is underlain mainly by limestone and other sedimentary rocks, and the lower half is underlain mainly by greenstone, basalt, and granodiorite. Fine gold was found on the surface and to a depth of about 4 feet.

HISTORY OF EXPLORATION AND DEVELOPMENT

HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

Goldrun Creek flows northeasterly to join the Tatshenshini River near Bear Camp on the Haines Road. Most of the work appears to have been done on a 2 mile section of the lower part of the creek just west of the Tatshenshini valley.

Gold was discovered on Goldrun (Blizzard) Creek by H.H. Darud in September 1933. Subsequently 15 claims and two leases were staked. Several parties were at work on the creek during 1934. After excavation of long and deep drainage cuts the heavy boulders and deep gravel forced abandonment before bedrock could be reached. It is reported that none of the work done even approached being profitable.
