

INDEX No. 5

Numerical List of Geological Geophysical & Geochemical Reports

Accepted for Assessment

1947-1970

British Columbia Department of Mines and Petroleum Resources

Index No. 5

Numerical List
of
Geological, Geophysical,
and Geochemical Reports
Accepted for Assessment
1947-70

1971

Reports accepted for credit on assessment requirements for properties held under the *Mineral Act* and the *Placer-mining Act* since January 17, 1947, reports on geochemical surveys accepted since April 6, 1951, and survey plots or line-cutting grids accepted since January 1968 are listed numerically below.

A copy of each report is filed in the office of the Mining Recorder for the mining division in which the property is located. Copies of all reports are also filed in the office of the Chief of the Mineralogical Branch, Department of Mines and Petroleum Resources, Douglas Building, Victoria. These reports are available for examination one year after their date of submission. Because of space limitations in the Victoria office, it is requested that appointments for examinations be made in advance if extensive use of the files is anticipated.

It is possible to obtain copies of any reports that are not held confidential by requesting the Chief, Mineralogical Branch, Department of Mines and Petroleum Resources, Victoria, to copy a report, specified by number and property name. The report is sent to a company in Vancouver that duplicates the report and any maps. These are sent to the individual, who is billed directly by the duplicating company. The original report is then returned to Victoria.

This numerical list of reports is indexed by N.T.S. sheet designation (see pp. 63-73), by which means it is possible to determine all the assessment reports in any N.T.S. area (that is, 104J/4W).

The property names used generally are the claim names, but it is not always feasible to list the names of all the claims comprising each property. The author of each report is given, as is the principal for whom the report was written.

REPORTS CREDITED FOR ASSESSMENT, 1947-70

INDEX

Locations of properties are described in the numerical list by N.T.S. (National Topographic System) designation. In the National Topographic System of mapping, the whole of Canada is divided into primary map quadrangles each 4 degrees latitude by 8 degrees longitude and each described by a number, for example, 104. The primary quadrangle is subdivided into 16 map sheets each 1 degree latitude by 2 degrees longitude and described by letters A to P, for example, 104G. Each lettered quadrangle is further subdivided into 16 map sheets each 15 minutes latitude by 30 minutes longitude and numbered 1 to 16, for example, 104G/7. Finally each sheet is halved east and west for maps of the 1:50,000 series and are described, for example, 104G/7E. An index to published topographic maps may be obtained by requesting Indexes 8 to 14 from the Department of Lands, Forests, and Water Resources, Victoria. It shows the N.T.S. map sheets covering the Province.

In the following index reports submitted for assessment credit are listed by N.T.S. sheet so that it is possible to determine all the assessment reports in any N.T.S. area.

In the offices of the Mineralogical Branch in Victoria outlines of areas surveyed for assessment credit have been plotted on a set of topographic maps. In addition, a card file is maintained which indexes the names of the claims which are the subject of the assessment reports.
