INTRODUCTION

This publication provides a compilation of data pertaining to surficial geology/terrain maps of British Columbia. This includes data on about 2000 maps covering territory within the provincial boundaries of B.C. The database is presented both as a tabulated listing, and graphically in a series of provincial base maps. The tabulated database presents the location (presented in relation to the National Topographic System), scale and agency involved. Corrections and updates to the database are welcomed and will be incorporated in the next revision.

The surficial geology of the earth is an important resource. Human activity including engineering, agriculture, mining and others is intimately tied to this uppermost geologic layer. Roads, bridges and buildings are continuously being erected across British Columbia, often rooted in deposits which can vary considerably over a few metres. A proper understanding of the materials upon which structures are built by engineers ensures long-term success and safety to the projects in question. Many of the materials needed for construction including aggregate deposits and placer minerals are limited resources comprising part of the surficial mantle. Unfortunately, the positive characteristics of surficial geology are occasionally overshadowed by negative aspects. Landslides, volcanic eruptions, river flooding, contaminated soils, and others pose a hazardous threat to the general population. In this case, land-use planners and administrators use surficial geologic data to formulate strategies which minimize risk to the populace.

All of the above issues are inter-related at some level. *Apriori* knowledge of the surficial geology provides management options in areas supporting limited mineral resources. These options can be explored before subsequent transportation corridors or urban development permanently impede further use of the resources. Potentially hazardous areas can be identified and mitigated prior to bridge, road and housing construction. Arable land can be protected from surface and groundwater pollution or zoned against future development if recognized as a limited resource. Appropriate courses of action relating to our land use are better made with knowledge of surficial geology. Terrain maps are the most common form of the surficial database and refer

to the characteristics and physical aspects of the landscape.

Several landscape attributes are commonly identified, evaluated and transferred to map format in terrain mapping. This commonly includes some combination of the following elements: landforms, types of sediment, soil types, geologic hazards, etc. Several types of maps addressing surficial aspects are in existence and reflect the specific objectives of the mapping exercise. Maps can range from 'aggregate' maps which document sand and gravel resources to 'terrain feature' maps which provide data on glacial, periglacial and mass-movement features, as well as other landforms. Quite often the same information is given by several types of map. The most frequent method of producing terrain maps involves stereoscopic airphoto interpretation, supplemented with literature searches and fieldwork (ground truthing). Unfortunately, information regarding the extent of ground truthing performed as part of the project rarely accompanies the finished map products. Mapping scale strongly influences the attention given to ground truthing which can vary from extensive at the 1:1 000 scale to none at all at the 1:1 000 000 scale.

The successful management of the earth's geologic surficial geology resources depends on a sound database upon which informed decisions can be formulated. Those responsible for contributing to this database include provincial and federal government agencies, universities and other academic institutions, as well as private industry. Some of these works have never been published or are inaccessible, whereas many others are available for general distribution or examination. A major hindrance to surficial map use by a wide client base appears to be a lack of knowledge regarding the coverage within the province. This publication provides a response to the need for a comprehensive index which details map coverage for British Columbia.

NTS INDEX	1-1		

TECHNICAL NOTES

COLUMN LEGEND

The tabulated listing is presented in three forms: 1) a continuous listing sorted according to increasing NTS number; 2) a segmented listing (27 categories) according to agency and map scale groupings; and 3) a segmented listing according to surficial map types. Columns in the tabulations include the following information:

NTS - National Topographic System Primary Quadrangles (1:1 000 000 scale) includes 82, 83, 92, 93, 94, 102, 103, 104 and 114.

250 - letter designation denoting 16 divisions (1:250 000 scale) of the primary quadrangles which is given as A to P inclusive. For example 94 A (Charlie Lake) by W. Mathews, 1978.

50 - numeric designation denoting 16 divisions (1:50 000 scale) of the larger A to P (1:250 000) NTS maps which is given as 1 to 16 inclusive. For example 93 P/10 (Arras) by N. Catto, 1992.

C - relates to specific cardinal direction divisions such as E (east), SW (southwest), etc. when applicable for the entry. For example, 93 N/1 E (Mount Milligan) by D. Kerr, 1991.

20 - British Columbia Geographic System denotes 100 divisions (1:20 000 scale) of the larger A to P (1:250 000) NTS maps which is given as 001 to 100 inclusive.

P - entries marked in this column indicate incomplete or partial areal coverage.

SCALE - map scale, presently includes 29 possibilities: 1: 1 000, 1:5 000, 1: 5 400, 1: 6 000, 1: 10 000, 1:12 500, 1:12 500, 1:15 000, 1:15 840, 1:20 000, 1:24 000, 1:25 000, 1:30 000, 1:31 680, 1:33 000, 1:40 000, 1:50 000, 1:62 500, 1:63 360, 1:70 000, 1:80 000, 1:100 000, 1:125 000, 1:126 720, 1:200 000, 1:250 000, 1:253 440, 1:500 000 and 1:1 000 000.

DEPARTMENT - This entry represents the agency or company which requested, sponsored, monitored, published or presently owns the resultant surficial map. Purchase and/or access requests to the specific maps should be directed toward the entries listed in this category.

MAP TYPE - 22 formats (*see below for Map Type Legend*).

AUTHORS - as listed.

YEAR - where known the date of publication.

The figures on the accompanying page provide an example of the mapping scale system used in the province.

93 C/3.2 1:15 000, 1:10 000

93 A.08.1 1:10 000

MAP TYPE LEGEND

The terminology of surficial maps varies considerably, as does the specific type of information provided on the map. To clarify this variability, individual map entries were categorized according to the types described below. The following list describes significant characteristics of each map type used in the index.

AGGREGATE RESOURCES - sand and gravel deposits.

BIOPHYSICAL - terrain units, recreation, wildlife and aquatic resources.

FOREST TERRAIN - generalized category. Maps not available to EMPR, this information was obtained through MOF and includes map coverage, authors, etc., but not map type. Maps in this category are likely to be a basic surficial geology map with slope and topographic information, possibly with data for logging roads and hazards.

GENERALIZED SURFICIAL GEOLOGY - texture, genetic materials, depth of surface materials and modifying processes.

GEOLOGICAL HAZARDS & PERIGLACIAL - as above with periglacial features overlain.

GEOLOGICAL HAZARDS - hazard classes (slope processes, periglacial processes, fluvial processes and specific hazards).

GEOLOGICAL PROCESSES - geological processes and status, slopes and specific processes.

PERIGLACIAL - periglacial features.

PHYSIOGRAPHIC CONSTRAINTS - limitation factors (depth to bedrock, drainage classes, impervious horizon, landscape position, organic content, stoniness class, slope-topographic class, soil texture, depth to water table, environmental hazards).

SLOPE PROCESSES - slopes and processes acting on slopes (avalanching, gullying and failing).

SOILS & SLOPES - typical soil classification maps with slope information as above.

SOILS & SURFICIAL GEOLOGY - soil association descriptions, surficial geology, topographic classes and soil drainage classes.

SURFACE MORPHOLOGY - similar to terrestrial maps but subaqueous and less specific.

SURFICIAL GEOLOGY (Terrain or Landforms) - texture, genetic materials, qualifying descriptors, surface expression and modifying processes.

SURFICIAL GEOLOGY & DRAINAGE - surficial geology and soil drainage classes.

SURFICIAL GEOLOGY & PHYSIOGRAPHIC CONSTRAINTS - combined Surficial Geology and Physiographic Constraints map types.

SURFICIAL GEOLOGY & SLOPES - surficial geology, slope classes and topography.

SURFICIAL GEOLOGY & TOPOGRAPHY - surficial geology and topography.

SURFICIAL GEOLOGY, DRAINAGE & SLOPES - surficial geology, soil drainage classes and slopes.

SURFICIAL MATERIALS - surface materials.

TERRAIN EVALUATION - surficial sediments, soil survey data, surficial geology maps or soils and landform maps.

TERRAIN FEATURES - glacial, periglacial and mass-movement features as well as other landforms.

(PHOTO) - indicates map is an air photo, air photo mosaic or corrected orthophoto.

(INDEX) - as described.

(LEGEND) - as described.

DEPARTMENT LEGEND

Provincial government ministries, federal government agencies and private industry representatives are listed by the following acronyms and abbreviations.

100MH - 100 Mile House Forest District
AG. CAN. - Agriculture Canada
ARROW - Arrow Forest District
ATCO - Atco Enterprises Ltd.
BC HYDRO - British Columbia Power and Hydro Authority
CANFOR - Canadian Forest Products Ltd.
CFI - Crestbrook Forest Industries Ltd.
CKRD - Central Kootenay Regional District
COAST - Coast Forest Management / Coast Wood Products
CRFD - Campbell River Forest District
CNRL - Crows Nest Resources Ltd.
CROWN - Crown Forest Industries Ltd. / Crown Paper
CSC - Coast Strategies Corp.
CYPRUS - Cyprus Anvil Mining and Exploration Company
FC - Fletcher Challenge Canada Ltd
DMP - Denny Maynard (personal, thesis), Westland Resource Group
DOMAN - Doman Industries Ltd.
EMPR - Ministry of Energy, Mines and Petroleum Resources
ENV. CAN. - Environment Canada
FC - Fletcher Challenge Canada Ltd
GR - Geddes Resources Ltd.
GSC - Geological Survey of Canada
GULF - Gulf Canada Resources
IFP - International Forest Products Ltd.
IND. - Industry (restricted)

MB - MacMillan Bloedel Ltd.
MCFD - Mid-Coast Forest District
MINEQUEST - MineQuest Exploration Associates Ltd.
MOF - Ministry of Forests
MOE - Ministry of Environment
MOEP - Ministry of Environment and Parks
MOTH - Ministry of Transportation and Highways
NCFD - North Coast Forest District
NE - Norecol Environmental Consultants
NEWHAWK - Newhawk Gold
NPT - Northwood Pulp and Timber Co.
OPFC - Ocean Falls Power Corporation
PAFD - Port Alberni Forest District
PD - Placer Dome Inc.
PGM - Prime Geochemical Methods Ltd.
PMFD - Port McNeill Forest District
PRFD - Prince Rupert Forest Region
PRRD - Prince Rupert Regional District
RES - Ministry of Forests - Research Branch
RIO ALGOM - Rio Algoma Exploration Ltd.
SCFD - Sunshine Coast Forest District
SCRD - Sunshine Coast Regional District
SKEENA - Skeena Cellulose Inc.
SLOCAN - Slocan Forest Products Ltd.
SQFD - Squamish Forest District
SRD - Squamish Regional District
TOG - Town of Gibsons
WC - Weyerhaeuser Canada Ltd
WESTAR - Westar Timber Ltd.
WFP - Western Forest Products Ltd.
WRC - Wedeene River Contracting

****NOTE:** MOE and MOEP have recently changed to MELP (Ministry of Environment, Lands and Parks)

MAP ILLUSTRATIONS

The following list provides a legend to the 27 map illustrations which appear in the final chapter. The category, map number and scale correspond to the legend on each of the figures.

CATEGORY	NUMBER	SCALE	SCALE VARIATIONS
EMPR	1	1:5 000	
	2	1:50 000	
	3	1:126 720	
FEDERAL	4	Others	1:15 840, 1:24 000
	5	1:50 000	1:50 000, 1:62 500, 1:63 360 1:80 000
	6	1:100 000	1:100 000, 1:125 000, 1:126 720
	7	1:250 000	1:250 000, 1:253 440
	8	1:1 000 000

ACKOWLEDGMENTS

Successful publication of this index represents the assistance during a two year period of several individuals within the Ministry of Energy, Mines and Petroleum Resources; specifically, Heather Blyth, Hilary Sandford, and Chris Smith. Individuals external to the ministry who were instrumental in this compilation by providing information or access to map data include Robert Buchanan (Ministry of Transportation and Highways), Steve Chatwin (Ministry of Forests), Kim Feltham (Consultant), Robert Gerath (Thurber Engineering Ltd.), Darren Ham (Ministry of Forests), Larry Lacelle (Ministry of Environment, Lands and Parks), Denny Maynard (Westland Resource Group), Robert Maxwell (Ministry of Environment, Lands and Parks), Mary Redmond (Ministry of Environment, Lands and Parks), and Bruce Thomson (Ministry of Forests).
