## REMARKS

"Strontianite float was discovered two miles and a half up the Ashnola river, in the Osoyoos Mining Division, late in the fall. Further investigation was impossible owing to the depth of snow."

(B.C.Rep., 1917.)

"Deposits of strontianite have been found on the lower Ashnola river, B. C. No development work of consequence has been done as yet, but the discoverers believe that there is a considerable body of the ore. Owing to the special uses to which the mineral is being put within the war area, its value as a means of signalling being one of the most notable, the prospect has attracted more than usual attention."

(Can. Mg. Jnl., 1-8-1918.)
