DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Scheelite occurs in lenses in calcareous schists and skarns at the edge of a muscovite granitic intrusion which is part of the Shuswap Metamorphic Complex. Scheelite was found in a zone less than 50 m in length that pinches out at less than 30 m of depth. Values of tungsten ranged to 1.68 % over 0.5 m.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located at about 5 500 feet elevation at the head of Martin Creek, west of the North Thompson River, some 130 km north-northeast of Kamloops.

The TV 1-2 claims were apparently staked on showings of scheelite float. Sulpetro Minerals Limited held an option on the property in 1983. Work included geological mapping, a geochemical soil survey (207 samples), and 176 m of diamond drilling in 11 holes.

Noranda Exploration Company Limited optioned the property. Work in 1985-86 included a magnetometer survey over 6 km, geochemical surveys comprising 1545 soil and 339 rock samples, trenching, and 303.7 m of diamond drilling in 8 NQ holes.

Teeshin Resources Ltd. reportedly entered a development and mining agreement with Noranda in 1985.
