DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Map 48-1936 indicates the area is underlain by Palaeozoic or Earlier volcanic and sedimentary rocks.

Mineralization occurs in fractures and narrow elongated lenticular zones in limestones and argillaceous rocks which are highly fractured and intruded by porphyry. High grade seams were found to be discontinuous. A sample assayed: gold, trace; silver, 50.1 oz/t; lead, 41.2%; zinc, 7.8%.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located at 6,100' elevation on the top of a ridge 1 mile north of Crowfoot Mountain; the mountain is located north of Shuswap Lake and some 58 miles northeast of Kamloops.

The Venus and Evelyn groups comprising 4 claims were owned by C.F. Johnson and associates from about 1927 to 1932. Exploration work was done in numerous trenches and pits, which readily filled with water. An electrical survey was carried out in 1931 and the results were investigated by a 29 foot shaft sunk in 1932.

The ground was held as the Whisky Jack (WJ 1-4) and Silver Weasel claims in 1984 but details are lacking.

Associated minerals or products - Lead, zinc.
