HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located at the 1,600' elevation on the northeast side of Nomash River 9 km northeast of Zeballos.

The showings were discovered by Alfred Bird in the early 1930's and staked as the Major group; no development was reported.

The Zeballos Dome group of 16 claims was staked on the showings in December 1937 by Alfred James, of Zeballos, and later sold to A.V. Seymour. Work in tracing the veins was done in open cuts and a 25' adit. One ton of sorted ore was shipped in 1939.

OWNER OR OPERATOR/PROPRIÉTAIRE OU EXPLOITANT

DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The property extends across a northwesterly striking contact of Triassic Quatsino limestone and underlying Karmutsen volcanics on the east. About 100' above the contact a sheared and altered zone strikes N18°W and dips 60°NE. For a width up to 80' the altered rocks are sparsely mineralized with pyrite and chalcopryrite. On the east these rocks are intruded by a feldspar porphyry dyke some 20' or more in width and parallel to the shearing. The dyke is fractured and veined with quartz locally containing minor pyrite and chalcopryrite.

HISTORY OF PRODUCTION/HISTORIQUE DE LA PRODUCTION

From 1 ton of ore shipped in 1939, 3 ounces of gold and 5 pounds of copper were recovered.
