DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

A pegmatite vein, which consists of an 8-inch center of quartz and a 2-inch border of orthoclase on each side, cuts a coarse-grained pink granite. The vein carries flakes of molybdenite.

HISTORY OF EXPLORATION AND DEVELOPMENT  
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

This occurrence is located 3 miles south of Ling Lake. A. Ostrem staked this occurrence prior to 1937 and carried out some stripping on the vein.

The Tor group of 54 recorded claims was optioned in July 1963 by Triform Explorations (B.C.) Ltd. Geochemical soil sampling indicated a weak anomalous zone, which was explored by trenching. Work by the company ceased in November 1963 and the option was subsequently dropped.

The property was held as the Jim and Green groups (72 claims) by Summit Oils Limited during 1969-1970. Work included geochemical surveys, and magnetometer and electromagnetic surveys over 9.9 line-miles.
