OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

Reports of 4- and 6-ounce gold assays from several samples obtained near Tudyah Lake led to a brief examination being made in June, 1959. The showing is an exposure of grey gritty quartzite which is silicified and only sparsely mineralized with pyrite. Two samples selected from the most pyritic material assayed: Gold, nil. (Holland, 1959).

HISTORY OF EXPLORATION AND DEVELOPMENT

The showing is located on the east side of the Hart Highway near Mile 95 from Prince George, and 2 miles north of the road leading to Melville Lodge on Tudyah Lake. A small amount of work has been done to expose the showing.
