

PRODUCT	PYRITE	PROVINCE OR TERRITORY	British Columbia	N.T.S. AREA	103 H/14	REF. PYR 2
---------	--------	-----------------------	------------------	-------------	----------	------------

NAME OF PROPERTY		PACKSACK		HISTORY OF EXPLORATION AND DEVELOPMENT <p>The property is located on the Ecstall River some 50 miles southeast of Prince Rupert. The claims lie on the east side of the ridge at the bend of the Ecstall River, 6 miles south of Johnston Lake.</p> <p>Ecstall Mining Company Ltd. carried out a reconnaissance geological survey in this vicinity in 1957 under the direction of W.R. Bacon. Sulphide showings were discovered at an elevation of about 800 feet in the beds of two intermittent streams on the east slope of what came to be known locally as Prospect Hill. Sixteen claims in two rows of eight (Packsack 1-8 and Gunnysack 1-8) were staked in a north-south direction. An electromagnetic survey was carried out over the showings in 1958.</p> <p>The assets of Ecstall were transferred to the parent company, Texas Gulf Sulphur Company, in 1960 and Ecstall was placed in voluntary liquidation in August of that year. Work during 1960 included 2,891 feet of diamond drilling in 11 holes. All the holes are reported to have cut pyrite mineralization, much of which is massive.</p> <p>The company name (Texas Gulf) was changed in 1972 to Texas Gulf, Inc. and in 1973 to Texasgulf Inc. During 1973 geological mapping, and a geochemical soil survey (119 samples) over 2 line-miles were carried out over Packsack 1-4 and Gunnysack 1-8. In 1975 a shootback electromagnetic survey was carried out over 9.75 line-kilometres on Packsack 1 and 2 and Gunnysack 1-6.</p>
OBJECT LOCATED - Centre of property.

OWNER OR OPERATOR				
DESCRIPTION OF DEPOSIT				
<p>Narrow continuous lenses of massive pyrite, carrying low values in chalcopyrite and sphalerite, occur in a palaeozoic remnant of chlorite and quartz-sericite schists in the granitic rocks of the Coast Range. The mineralized zone was traced for a strike length of 2,000 feet beneath overburden by an electromagnetic survey. A maximum width of 20 feet was reported.</p>				
Associated minerals or products - Copper, zinc.
